DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Group I, drawn to a shielding assembly with arc supports.

Group II, drawn to a shielding assembly with three strut supports.

Group III, drawn to a shielding assembly with movable arch supports.

Group IV, drawn to a collapsible assembly with locks and a concentric member.

Group V, drawn to a shielding assembly with a central mounting member and pivot point.

Group VI, drawn to an umbrella-like shield with a supporting strut.

Group VII, drawn to a locking mechanism.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations

Art Unit: 3637

of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

None of the following claims are deemed generic.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The special technical feature of the Group I invention is the arc supports. The special technical feature of the Group II invention is the three strut supports. The special technical feature of the Group III invention is the movable arch supports. The special technical feature of the Group IV invention is the concentric member with locks. The special technical feature of the Group V invention is the central mounting member and pivot point. The special technical feature of the Group VI invention is the umbrella-like shield with a supporting strut. The special technical feature of the Group VII invention is the locking mechanism.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
